

INTERMEDIATE WORK ITEM: Custody Server v1.4.2 Build

ID: DS-Intermediate-v1.4.2-Build

Type: Infrastructure patch (non-investigation work)

Scope: Add write-capable `documentary_gap` logging to Custody Server

Prerequisite: Session 12 closure (complete)

Blocking: Session 13 startup (optional but recommended)

Estimated Duration: 30-45 minutes

OBJECTIVE

Add a write-capable `emit_documentary_gap()` tool to Custody Server v1.4.1, enabling Claude Code to log documentary gaps directly to governance ledger with proper `entry_type: "documentary_gap"` structure, rather than relying on findings-file workaround.

Result: Session 13 can use ledger as the canonical gap record, maintaining cleaner separation between observations (findings files) and procedural events (ledger).

SPECIFICATION

Problem Statement

Session 12 Amendment Requirement:

Documentary gaps must be flagged explicitly via ledger entry (`entry_type: "documentary_gap"`) with gap identified, reason identified, significance level, and status (open/closed).

Current State (v1.4.1):

- `entry_type: "documentary_gap"` exists in `ENTRY_TYPES` ✓
- No tool exists to emit these entries from Claude Code
- Gap logging deferred to findings files (functional but not per specification)

Required Fix: Add `emit_documentary_gap(gap_identified, reason_identified, significance, status)` tool to Custody Server, allowing Claude Code to call it directly via MCP protocol.

TOOL SPECIFICATION

Tool Name

`emit_documentary_gap`

Description

Record a documentary gap to the governance ledger with proper structure. A documentary gap is an indicated communication, document, or event that cannot presently be located or examined in the corpus.

Parameters

Parameter	Type	Required	Description
gap_identified	string	Yes	Concise description of what's missing (e.g., "Aug 22, 2001 'Raptor's Health' meeting content")
reason_identified	string	Yes	Why this gap was identified (e.g., "Meeting invite exists but body text absent"; "Referenced in Oct 4 memo, not independently filed")
significance	string (enum)	Yes	Significance to investigation: "high", "medium", "low"
status	string (enum)	Yes	Status of the gap: "open" (not yet found), "closed" (exhaustively searched, not found)
source_message_id	string	No	Message ID or file path where gap was identified, if applicable
stage	string	No	Investigation stage where gap was identified (e.g., "Stage 4 body-level reading")

Output

Returns a JSON object containing:

- `gap_id`: Unique identifier for this gap entry
- `action_id`: Ledger action ID
- `timestamp`: ISO timestamp
- `entry_type`: "documentary_gap" (confirmed)
- `status`: Success/failure

Example Call

```
emit_documentary_gap(  
  gap_identified="Oct 3, 2001 'Wednesday meeting' referenced in Oct 4  
memo",  
  reason_identified="Oct 4 memo text: 'follow up to the meeting we had on  
Wednesday' – no independent message or meeting notes found",  
  significance="high",  
  status="open",  
  source_message_id="kaminski-v/discussion_threads/7832",  
  stage="Stage 4 body-level reading"  
)
```

Ledger Entry Structure

Gaps logged as:

```
json  
  
{  
  "ledger_entry_id": "<uuid>",  
  "session_id": "DS-xxxxxx-SXX",  
  "task_id": "DS-xxxxxx-SXX-TXX",  
  "action_id": "DS-xxxxxx-SXX-AXX",  
  "entry_type": "documentary_gap",  
  "timestamp": "2026-08-13T...",  
  "operator": "Ken Tombs",  
  "description": "Documentary gap: [gap_identified]",  
  "material_decision": false,  
  "severity": "informational",  
  "payload": {  
    "gap_identified": "[as provided]",  
    "reason_identified": "[as provided]",  
    "significance": "[high|medium|low]",  
    "status": "[open|closed]",  
    "source_message_id": "[if provided]",  
    "stage": "[if provided]"  
  },  
  "status": "active"  
}
```

IMPLEMENTATION NOTES

Code Location

File: E:\AA11 XPlain\Dossier Space Pilot\Custody
Server\dossier_custody_server_v1_4_2.py

Changes Required

1. In CustodyServer class, add method:

python

```
def emit_documentary_gap(self, gap_identified, reason_identified, significance):
    """Record a documentary gap to the governance ledger."""

    action_id = self.ledger.next_action_id()

    gap_entry = {
        "gap_identified": gap_identified,
        "reason_identified": reason_identified,
        "significance": significance,
        "status": status,
        "source_message_id": source_message_id or "",
        "stage": stage or ""
    }

    self.ledger.emit_entry(
        entry_type="documentary_gap",
        action_id=action_id,
        task_id=self.task_id,
        description=f"Documentary gap: {gap_identified}",
        material_decision=False,
        severity="informational",
        tool_output=gap_entry
    )

    return {
        "gap_id": str(uuid.uuid4()),
        "action_id": action_id,
        "gap_identified": gap_identified,
        "timestamp": datetime.utcnow().isoformat() + "Z",
        "status": "recorded"
    }
```

2. In MCP server (after @server.call_tool()), add handler:

python

```
elif name == "emit_documentary_gap":
    result = custody.emit_documentary_gap(
        gap_identified=arguments.get("gap_identified"),
        reason_identified=arguments.get("reason_identified"),
        significance=arguments.get("significance"),
        status=arguments.get("status"),
        source_message_id=arguments.get("source_message_id"),
        stage=arguments.get("stage")
    )
```

3. In tool registration (list_tools()), add:

python

```
Tool(
    name="emit_documentary_gap",
    description="Record a documentary gap (missing communication, document, c",
    inputSchema={
        "type": "object",
        "properties": {
            "gap_identified": {"type": "string", "description": "What's missi",
            "reason_identified": {"type": "string", "description": "Why it's",
            "significance": {"type": "string", "enum": ["high", "medium", "lo",
            "status": {"type": "string", "enum": ["open", "closed"], "descrip",
            "source_message_id": {"type": "string", "description": "Message w",
            "stage": {"type": "string", "description": "Investigation stage ("
        },
        "required": ["gap_identified", "reason_identified", "significance", "
    }
)
```

VERSION METADATA

- **Previous Version:** v1.4.1 (Session 12)
- **New Version:** v1.4.2
- **Session ID:** DS-202608xx-S12 (interim infrastructure task, not a formal session)
- **Change:** Add emit_documentary_gap() tool for direct ledger gap logging

BUILD CHECKLIST

- ☐ Create v1.4.2 file from v1.4.1 template

- ☐ Add emit_documentary_gap() method to CustodyServer class
 - ☐ Add MCP handler for "emit_documentary_gap" call
 - ☐ Add tool registration (list_tools)
 - ☐ Update version string in docstring: "Dossier Space MCP Custody Server v1.4.2"
 - ☐ Update SESSION_ID if needed (keep current session ID or use new one?)
 - ☐ Test: Restart server, confirm startup message shows v1.4.2
 - ☐ Test: Call emit_documentary_gap via Claude Code, verify ledger entry created
 - ☐ Verify entry_type is "documentary_gap" and payload contains all fields
 - ☐ Copy final v1.4.2 file to outputs for download
 - ☐ Document completion
-

TESTING PROCEDURE (Simple Smoke Test)

1. **Start v1.4.2 server** with updated code
2. **From Claude Code**, call:

```
emit-documentary-gap --gap-identified "Test gap" --reason-identified "Test reason" --significance "low" --status "open"
```

3. **Verify ledger entry:**

powershell

```
Get-Content session-ledger.jsonl -Tail 1 | Select-String "documentary_gap"
```

4. **Confirm:** entry_type = "documentary_gap", payload contains gap_identified, reason_identified, significance, status
-

BLOCKERS

None. This is a pure addition; no breaking changes to existing code.

TIMELINE

- **Estimated effort:** 30-45 minutes (code changes + testing)
 - **Recommended timing:** After Session 12 closure, before Session 13 startup
 - **Priority:** Recommended but not critical (Session 13 can proceed with findings-file workaround if needed)
-

SIGN-OFF

Designed by: Claude (Design Lead)

Specification reviewed by: Ken Tombs (Operator)

Status: READY FOR BUILD

Next: Build v1.4.2, test, verify. Then proceed to Session 13 startup.
